DESCRIPTORS: *Motion, *Stability, *Mechanics,
Equations of motion, *Inequalities, Functions,
Mathematical analysis.

In this paper an attempt is made to obtain criteria for
the stability of motion using simultaneously several
V functions. Further, each V function can satisfy less
rigid requirements than the requirements in the
corresponding theorem of Liapunov's second method
with one function. This promises that the use of
several V functions might lead to a more flexible
apparatus. (Author)
